

Location : Bangalore

Mazumdar-Shaw Cancer Center (M SCC), located at Narayana Health City, Bangalore is one of the world's largest cancer centers with 1400 inpatient beds and state of the art infrastructure.

World-class treatment is provided to 5000 outpatients a day, apart from the 1400 inpatients. A large number of internationally renowned oncologists world-wide, from prestigious universities like Cornell and Harvard, with their vast experience and knowledge are full time consultants at M SCC.

M SCC aims at leveraging technology to develop tailored treatment strategies for individual cases. A primary enabler in this endeavour is the Tumour Board, which facilitates collaboration among medical oncologists, surgeons, radiation oncologists and other specialists. The Tumour Board discusses and reviews the medical history and condition of all patients to determine the best available treatment option. The technology adopted enables the doctors to have access to a database of cases around the world, the treatment protocol and the results at the click of a mouse. Thus, patients get the advantage of standardized international-level care without expending time and money looking for a second opinion.

The state-of-the-art Cancer Center provides comprehensive and dedicated cancer care of the highest international standards with 20 Operation Theaters and 3 Elekta Linear Accelerators & Brachy Therapy, IMRT, IGRT & VMAT.

The Radiation Oncology department performs radiotherapy – often in combination with chemotherapy and / or surgery. Radiation with pin-point precision enhances the chances of cancer kill and also reduces side effects. The Molecular Oncology department analyzes tumors at its genetic level – this helps in providing customized and targeted chemotherapy.
